Profile

Currently, I am working as a backend developer at PT. Timedoor Indonesia. As a Backend Developer, I have successfully contributed to several projects over the past few years, focusing on building admin panels and APIs for mobile applications. My expertise spans the full development lifecycle, from designing efficient and scalable databases to launching projects. I work closely with designers to analyze and refine database designs, ensuring optimal relationships between tables and alignment with the requirements of both mobile and web applications.

I bring a strong aptitude for fast learning and adaptability, enabling me to quickly embrace new programming languages, tools, and frameworks to meet project requirements. My ability to hadle multitasking environments allows me to manage multiple projects or tasks simultaneously while consistently delivering high-quality results. As I continue to grow my expertise in backend development, I am increasingly focused on machine learning and advanced technologies. Driven by a passion for innovation, I actively seek out new methodologies and leverage third-party tools to develop creative and impactful solutions.

Additionally, I am dedicated to improving my communication skills to enhance teamwork and collaboration. I believe that strong communication is essential for fostering solid team dynamics and enabling collective growth. By strengthening this ability, I aim to contribute to a dynamic work environment that supports the development of both the team and the company.
